Spatial & Gray Level Resolution

Spatial Resolution

1024

512

256

128

64

32

$1024 \times 1024 \times 8 \rightarrow 1MB$

Spatial Resolution

$M \times N \times K$ → Quantization
Sampling

Intensity Level Resolution

- ◆ *Intensity level resolution* refers to the number of intensity levels used to represent the image
 - The more intensity levels used, the finer the level of detail in an image
 - Intensity level resolution is usually given in terms of the number of bits used to store each intensity level

Intensity Level Resolution

Number of Bits	Number of Intensity Levels	Examples
1	2	0, 1
2	4	00, 01, 10, 11
4	16	0000, 0101, 1111
8	256	00110011, 01010101
16	65,536	1010101010101010

Intensity Level Resolution

$M \times N \times K$

false

contours/edge

Intensity Level Resolution

256 grey levels (8 bits per pixel)

128 grey levels (7 bpp)

64 grey levels (6 bpp)

32 grey levels (5 bpp)

16 grey levels (4 bpp)

8 grey levels (3 bpp)

4 grey levels (2 bpp)

2 grey levels (1 bpp)

Resolution: How much is enough?

- ◆ How many samples and gray levels are required for a good approximation?
 - Quality of an image depends on number of pixels and gray-level number
 - The more these parameters are increased, the closer the digitized array approximates the original image
 - But: Storage & processing requirements increase rapidly as a function of N , M , and k

Resolution: How much is enough?

- ◆ Depends on what is in the image and what you would like to do with it

• Upsampling \rightarrow Interpolation

• Downsampling \rightarrow Decimation

Image Resizing

◆ Pixel replication

[1 2 3 4 5]

[1 1 2 2 3 3 4 4 5 5] (One step)

[1 1 1 2 2 2 3 3 3 4 4 4 5 5 5] (Two step)

[1 1 2 2 3 3 4 4 5 5] $w_2 - 8 \text{ pixels}$ complete

Enlarging an Image

Example:
zoom this
image 4x to
get this
image.

Start with a blank image 4 times the linear dimensions of the original.

Fill in every 4th pixel in every 4th row with the original pixel values.

Enlarging an Image

Detail showing every 4th pixel in every 4th row with the original pixel values.

Enlarging an Image

Replicate the values

Image Interpolation

- ◆ Nearest neighbour interpolation
 - Simple but produces undesired artefacts
- ◆ Bilinear Interpolation
 - Contribution from 4 neighbors
- ◆ Bicubic Interpolation
 - Contribution from 16 neighbors

3	9
7	8

$$Ax + By + Cxy + D = f(x, y) \leftarrow$$

letsenhave io

1	3	?	9	
	7		8	

$$f(1, 2) = A + 2B + 2C + D \leftarrow$$

$$f(1, 1) = A + B + C + D$$

$$3 = A + B + C + D \quad \text{--- (1)}$$

$$9 = A + 3B + 3C + D \quad \text{--- (2)}$$

$$7 = 3A + B + 3C + D \quad \text{--- (3)}$$

$$8 = 3A + 3B + 9C + D \quad \text{--- (4)}$$

Interpolation: Comparison

We'll enlarge this image by a factor of 4 ...

... via bilinear interpolation and compare it to a nearest neighbor enlargement.

Interpolation: Comparison

Original
Image

To better see what happens, we'll look at the parrot's eye.

Interpolation: Comparison

Pixel replication

Bilinear interpolation

Interpolation: Comparison

Pixel replication

Bilinear interpolation

Relationships between pixels

- ◆ Neighbors of pixel are the pixels that are adjacent pixels of an identified pixel

4- Neighbors of a Pixel – $N_4(p)$

What are the
coordinates of each of
the blue pixels

$(x-1, y)$, $(x+1, y)$, $(x, y-1)$, $(x, y+1)$

Diagonal Neighbors of a Pixel $-N_D(p)$

$(x-1, y-1)$, $(x+1, y-1)$, $(x-1, y+1)$, $(x+1, y+1)$

8- Neighbors of a Pixel – $N_8(p)$

$$N_8(p) = N_4(p) \cup N_D(p)$$

$$(x-1, y), (x+1, y), (x, y-1), (x, y+1)$$

$$(x-1, y-1), (x+1, y-1), (x-1, y+1), (x+1, y+1)$$

Determine different regions in the image

CCA
/
Connected
Component
analysis

$$v = \{1\} \leftarrow$$

Connectivity

- ◆ Establishing boundaries of objects and components in an image
- ◆ Group the same region by assumption that the pixels being the same color or equal intensity
- ◆ Two pixels p & q are connected if
 - *They are adjacent in some sense*
 - *If their gray levels satisfy a specified criterion of similarity*

Connectivity

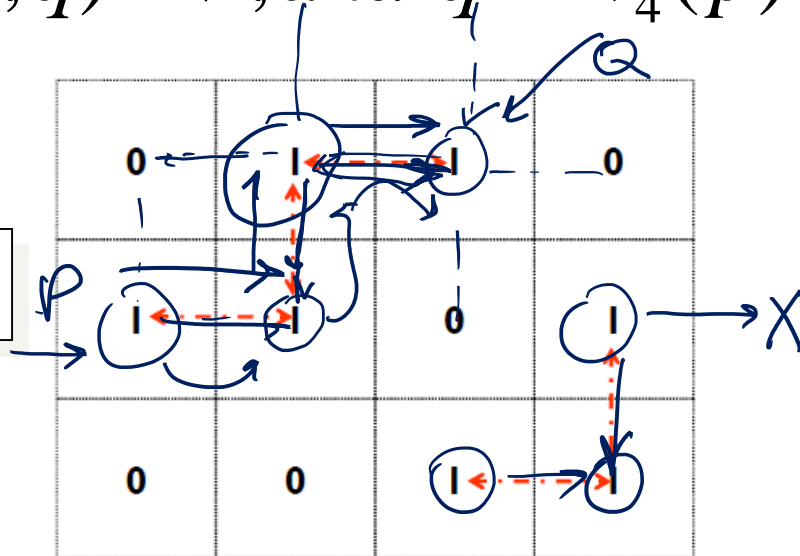

V: Set of gray levels used to define the criterion of similarity

4-connectivity

If gray level

$$(p, q) \in V, \text{ and } q \in N_4(p)$$

Set of gray levels $V = \{1\}$

Connectivity

V: Set of gray levels used to define the criterion of similarity

8-connectivity

If gray level

$(p, q) \in V, \text{ and } q \in N_8(p)$

Set of gray levels $V = \{1\}$

Connectivity

V: Set of gray levels used to define the criterion of similarity

m-connectivity (Mixed Connectivity)

If gray level

$(p, q) \in V$, and q satisfies one of the following:

- a. $q \in N_4(p)$ or
- b. $q \in N_D(p)$ And $N_4(p) \cap N_4(q)$ has no pixels whose values are from V

Example: m – Connectivity

- ◆ Set of gray levels $V = \{1\}$

Note: Mixed connectivity can eliminate the multiple path connections that often occurs in 8-connectivity

Paths

- ◆ **Path:** Let coordinates of pixel p : (x, y) , and of pixel q : (s, t)
- ◆ A *path* from p to q is a sequence of distinct pixels with coordinates: $(x_0, y_0), (x_1, y_1), \dots, (x_n, y_n)$
where $(x_0, y_0) = (x, y)$ & $(x_n, y_n) = (s, t)$, and (x_i, y_i) is adjacent to (x_{i-1}, y_{i-1}) $1 \leq i \leq n$

Test Yourself

Consider the image segment shown.

- (a) Let $V = \{0, 1\}$ and compute the lengths of the shortest 4-, 8-, and m -path between p and q . If a particular path does not exist between these two points, explain why.
- (b) Repeat for $V = \{1, 2\}$.

Label

Mat A
B ←

$$y[n] = x[n] - x[n-1]$$

$$y[n] = x[n+1] - x[n]$$

- Label = 0
- for any pixel → $v \in \{1\}$
- see A + B
- ① if both $\neq v$
assign a new Label
- ② if any one = v
assign same Label
- ③ both = v
 - a. both with same label
↳ assign that label
 - b. both diff
 - assign priority label
 - update table

CC labeling – 4 Connectivity

- ◆ Process the image from left to right, top to bottom:
 - 1.) If the next pixel to process is 1
 - i.) If only one of its neighbors (top or left) is 1, copy its label.
 - ii.) If both are 1 and have the same label, copy it.
 - iii.) If they have different labels
 - Copy the label from the left.
 - Update the equivalence table.
 - iv.) Otherwise, assign a new label.

Pass 1

- ◆ Re-label with the smallest of equivalent labels

Pass 2

CC labeling – 4 Connectivity

CC labeling – 4 Connectivity

CC labeling – 8 Connectivity

Same algorithm but examine also the upper diagonal neighbors of p

Distance Metrics

- ◆ Let pixels p , q and z have coordinates (x,y) , (s,t) and (u,v) respectively.
- ◆ D is a distance function or metric if
 - $D(p,q) \geq 0$ and
 - $D(p,q) = 0$ iff $p = q$ and
 - $D(p,q) = D(q,p)$ and
 - $D(p,z) \leq D(p,q) + D(q,z)$

City block distance (D_4 distance)

$$D_4(p, q) = |x - s| + |y - t|$$

- ◆ Diamond with center at (x, y)
- ◆ $D_4 = 1$ are the 4 neighbors of pixel $p(x, y)$

4	3	2	3	4
3	2	1	2	3
2	1	1	1	2
3	2	1	2	3
4	3	2	3	4

$(3,3)$

(x,y)

$(5,5)$

(s,t)

$$D_4(p, q) = |x_1 - x_2| + |y_1 - y_2|$$

$$= |3 - 5| + |3 - 5|$$

$$= 4$$

$$D_4(p, q) = |x - s| + |y - t|$$

Chessboard distance (D_8 distance)

$$D_8(p, q) = \max(|x - s|, |y - t|)$$

2	2	2	2	2
2	1	1	1	2
2	1	0	1	2
2	1	1	1	2
2	2	2	2	2

- ◆ Square centered at $p(x,y)$
- ◆ $D_8 = 1$ are the 8 neighbors of pixel $p(x,y)$

2	2	2	2	2
2	1	1	1	2
2	1	1	1	2
2	1	1	1	2
2	2	2	2	2

(x, y) →

(s, t) →

$$D_8(P, Q) = \max(|x-s|, |y-t|)$$

$$\max(|3-5|, |3-5|)$$

$$= 2$$

Euclidean Distance

$$D_e(p, q) = \sqrt{(x - s)^2 + (y - t)^2}$$

A circle with radius r centered at (x, y)

Arithmetic Operations

- ◆ Carried out between corresponding pixel pairs

$$s(x, y) = f(x, y) + g(x, y)$$

$$d(x, y) = f(x, y) - g(x, y)$$

$$p(x, y) = f(x, y) \times g(x, y)$$

$$d(x, y) = f(x, y) \div g(x, y)$$

Arithmetic Operations

- ◆ Conversion to range 0 – 255
- ◆ Difference of two 8-bit images: -255 to 255
- ◆ Sum of two 8-bit images: 0 to 510
- ◆ Solution?

Set all values < 0 to 0

Set all values > 255 to 255

Full range of arithmetic operation not captured

Data Normalization

Arithmetic Operations

- ◆ First perform the operation

$$K \left[\frac{f - f_{\min}}{f_{\max} - f_{\min}} \right]$$

$$f_m = f - \min(f)$$

Creates an image whose minimum value is 0

- ◆ Then perform

$f =$

-9	0	7
9	3	15
1	0	3

← 3 bits/pixel

$$f_s = K \left[f_m / \max(f_m) \right]$$

Creates a scaled image f_s with values in the range $[0 K]$

$$K = \frac{1}{2} - 1 = 7$$
